

Better protect your identity and credentials online

Take advantage of Digital Identity Protection features from ID Watchdog

Personal VPN & Safe Browsing with NordVPN

Take advantage of the additional protection you can get from a personal VPN. A VPN service creates an encrypted “tunnel” between you and the internet, securing the data traveling between you and your destination—whether that’s a search engine or an online banking account. A VPN helps protect your privacy and hide your digital footprint. ID Watchdog has teamed with NordSec to bring you NordVPN—the #1 industry ranked VPN for speed, security, and ease of use.¹ Personal VPN can be used on up to six devices (yours and your family’s) at the same time!

Set up your Personal VPN to

- Connect to the internet securely and anonymously
- Browse safely with additional protection from malicious websites and device-controlling botnets while blocking pop-up ads and videos
- Help keep your online identity safe while traveling worldwide (across the US and in 59 other countries)

Password Manager

Complicated passwords that are unique to every account can be hard to remember, yet strong passwords are your first line of defense against the theft of your personal information. Many security experts recommend the use of password managers, which generate and store passwords, to

- More securely manage login credentials for all your accounts
- Avoid password reuse
- Strengthen passwords

Digital Identity Protection features from ID Watchdog

Easy to Activate:

- 1 Log into your ID Watchdog account
- 2 Select Cyber from the top menu bar
- 3 Click on the Activate button in the Digital Identity Protection section
- 4 Select Get NordVPN Code or Get NordPass Code for your activation code
- 5 Follow the instructions for installing NordVPN or NordPass
- 6 To link your NordVPN and NordPass accounts, use the same email address to set up both accounts
